Naturalized US Citizen (2011) Immigrated from Romania in 2001 on an O1 (extraordinary ability in the sciences) visa sponsored by the Albert Einstein College of Medicine, New York, NY.

PERSONAL STATEMENT

I am an expert in systems biology and PI/Co-PI/Investigator of university-, NIH-, NSF- and CURE-funded grants on functional and computational genomics. I published in biophysics, biomathematics, electrophysiology, genomics, pharmacology, mathematical ecology and even mathematical politics. Only my peer-reviewed genomics publications include so far: 84 articles, 2 edited books, 12 book chapters, 86 genomic datasets and description of microarray platforms, 7 bioprojects, 7 nucleotides and 24 proteins in the NCBI Gene Expression Omnibus. Since immigrated in the U.S.A. (2001), I was engaged in several collaborative genomic studies in which the collaborator provided the biological model and my laboratory contributed the genomics experiment, data processing and mathematical modeling. This strategy allowed me to cover projects on a wide diversity of cells and tissues from humans and animal (mouse, rat, rabbit, dog, chicken) models of: pulmonary hypertension, cancer, epilepsy, infantile spasms, multiple sclerosis, cardiac failure, cerebral malaria, glaucoma, Chagas and lyme diseases. My lab determined the transcriptomic alterations caused by exposure to chronic intermittent and constant hypoxia, microgravity, and various carcinogens and infectious germs (*Borrelia burgdorferi*, *Trypanosome cruzi*, *Plasmodium berghei*, *Enterococcus faecium*). I have optimized the experimental protocol and normalization, introduced the “**genomic fabric paradigm**”, “**Principle of transcriptomic stoichiometry**” and the “**gene master regulator approach**”. I have also developed mathematically advanced analytical tools and associated software programs to quantify the transcriptome topology and its remodeling during maturation, progression of a disease and in response to external stimuli or a treatment.

In my studies, I was honored by the collaboration of outstanding scientists from: Albert Einstein College of Medicine (NY), Bar-Ilan University (Israel), Baylor College of Medicine (TX), Boehringer Ingelheim Pharma (Germany), Carol Davila University of Medicine (Romania), Chagas Institute (Brazil), Duke University (NC), Federal Universidad do Rio de Janeiro (Brazil), Fishawack Health Pharmaceuticals (UK), Food and Drug Administration (MD), Fundação Oswaldo Cruz (Brazil), Humboldt Universitet (Germany), Katholieke Universiteit (Belgium), Leibnitz Institute for Neurobiology (Germany), Mario Negri Institute (Italy), MD Anderson Cancer Institute (TX), New Vision University (Georgia), New York Institute of Technology (NY), New York Medical College (NY), NIH-National Institute for Child Health and Development (MD) Prairie View A&M University (TX), Queensland University (Australia), Ruhr University (Germany), Sydney University (Australia), Universita di Bari (Italy), Universidad de Caldas (Colombia), Universidad de Lujan (ARG), Universidad del Quindio (Colombia), University of Bucharest (Romania), University of Geneva (SWI), University of Louisville (KY), University of Nevada (NV), University of Patras (GRE), University of Szeged (HUN), University of Washington (WA), (University of Wroclaw (POL), Vanderbilt University and Virginia Commonwealth University Medical Center (VA). The large number of research partners and the wide spectrum of their academic institutions indicate my collaborative skills and the audience of the experimental and theoretical methods I have developed.
